

KIOSK

DHERMI, ALBANIA

assignment design of a kiosk structures in Dhermi **location** Dhermi, Albania **size** 20 sqm **client** Himara municipality **services** Design approach, concept design, schematic design and follow up construction **status** completed, 2025 **sponsor** Rinia04 Shpk **team** Boris Tikvanski, Ani Muraku, Adonel Myzyri **project code** 2440-DME

The Kiosk project was developed in response to the removal of informal structures in Dhermi, a fast-growing tourist village on Albania's coast. With tourism rising, the need for organized, adaptable infrastructure became pressing.

The design focuses on sun protection, upper-level storage, and layout flexibility for various vendors. Modular and affordable, the kiosk is easy to build, dismantle, and relocate using local, climate-appropriate materials

Its defining feature; a tapered, canopy-box roof, opens for shade by day and closes for secure overnight storage. This dynamic element allows smooth transitions between active use and closure, aligning with daily commercial rhythms.

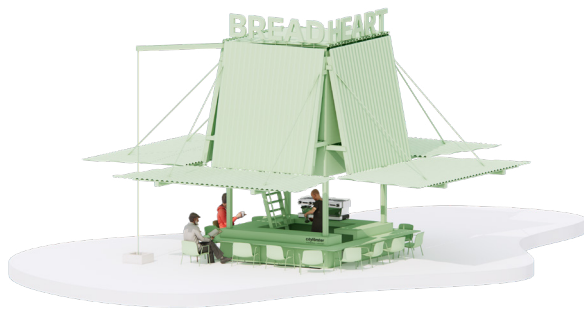

The open ground level supports multiple configurations, while design investment is concentrated in the expressive roof. Quick to assemble and season-ready, the kiosk offers a cost-effective, climate-responsive solution for small businesses.
