

# DISTRICT LANDSCAPE DIETENBACH

FREIBURG IM BREISGAU

**assignment** Competition for the new district Dietenbach **location** Freiburg im Breisgau, Germany **size** 108 ha, 883.000 m<sup>2</sup> GFA, 5.500 units **client** City of Freiburg im Breisgau **status** completed, 2018 **team** Verena Brehm, Oliver Seidel, Britta Bahnemann, Elisa Korfage, Zihui Li, Tim Mohr, Felix Rebers **cooperation** felixx landscape, freiwurf LA, R+T Verkehrsplaner, Transsolar KlimaEngineering **award** 1. prize **projectnumber** 1735-NSD

How does a newly developed city district become a vibrant place to live?

The characterful landscape of Freiburg with the surrounding Schwarzwald serves as the decisive basis for the newly designed district Dietenbach. The four emerging quarters will be connected by a ring boulevard. In contrast to the generous open spaces, which serve as decelerated exercise and relaxation areas and make a significant contribution to nature and species protection, pulsating life takes place here. The new city centre serves as a bracing supply center and community reference point with symbolic centrality. In addition to the 5,500 residential units, new jobs and schools will be created in the 108-hectare area, which will complete the new living environment.

## Mobility concept

The mobility concept pursues the goal of reducing motor vehicle traffic, car ownership, and the number of parking spaces. This makes an important contribution to an attractive living environment, affordable living space, and environmentally friendly transport. It is achieved by creating attractive offers for pedestrian and bicycle traffic, public transport with light rail, as well as offers for car sharing and e-mobility, and also by parking in district garages in less sensitive locations that are up to 200m away from the apartments.

Plan: The new district Dietenbach is structured by the iconic landscape, especially the eponymous Dietenbach.
